CLEANING PROCESS FOR CURA[1]

DOORALERT STRIP MONITOR AND RESIDENT WRISTBAND TRANSMITTERS

1. Check equipment. If it is visibly damaged or torn, discard and order new equipment.
2. If there is no visible damage, then proceed to clean equipment.
3.. Ensure the edges and any creases and recesses of equipment are wiped / brushed, also around any openings on equipment and accessories.
4. For infection control base cleaning, a 2 step process is recommended. (Subject to site cleaning policies.)
    - Step 1: wipe down equipment and monitors with a neutral solution ie: soap based disinfectant.
    - Step 2: wipe down with a chlorine based solution of 1/1000 parts Sodium Hypochlorite solution.
5. Milton Solutions or Equivalent, Tuffie 5 Wipes and Clinell Universal Wipes can also be used.
6. Leave to air dry.

Note:
Please check with local infection control procedures as they may vary from state to state.
Do not use any alcohol based wipes or solutions.

Please note that any liquid can potentially damage the electronic components inside the equipment, so care should be taken to wring excess liquid from cloth before wiping surfaces. (Do not spray any cleaning solution into or onto equipment.)
