Door Strip Monitor Installation for Left Swinging Door

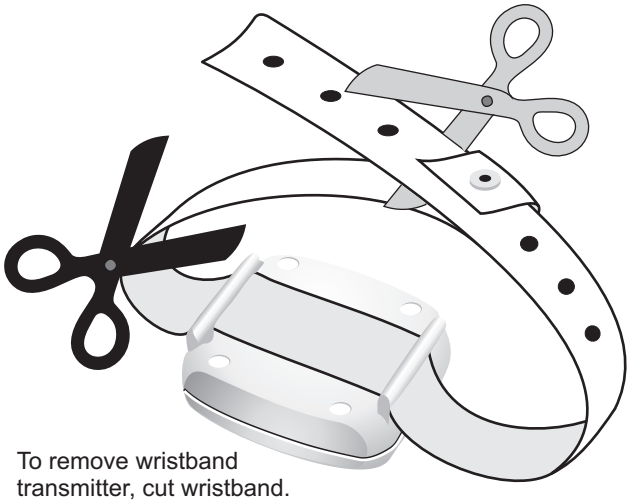

Do not use screws to attach the door strip monitor to wall. Peel off double sided adhesive & stick onto wall.

For right swinging doors, install in recommended position, opposite to illustration.

Configured for alarm to sound when a monitored resident *opens* the door.

After fitting wristband transmitter, cut off excess band.

To remove wristband transmitter, cut wristband.

To adjust volume and/or range (if required), remove bottom cover & use a small flat screwdriver to change settings. The range and volume is pre-set to suit most applications.
